

# INSPIRE PLAY

A lot of schools are having to condemn their timber trim trail play equipment and when you ask why this is, the answer is pretty standard.

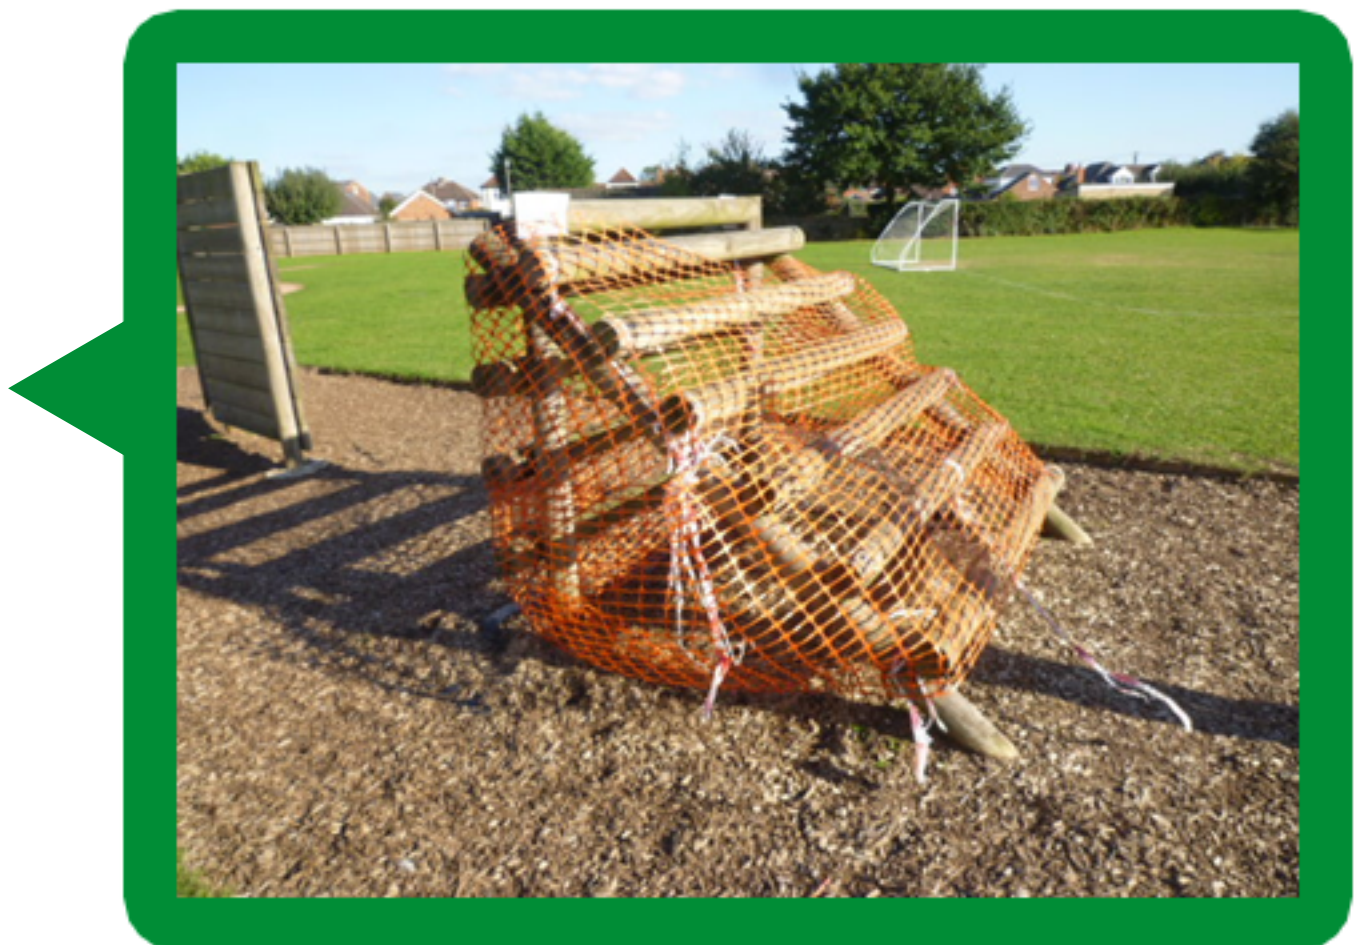

The play equipment is no longer safe because it is either starting to rot.

The rounded timber has cracked so badly that the children are getting lots of splinters or are putting their fingers into the gaps.

So it usually falls upon the site manager to constantly maintain it, replace some parts

or as in a lot of cases, the trim trail equipment is simply condemned because it is beyond repair or is simply uneconomic to do so.

So if you consider the above, why not therefore buy trim trail recycled plastic play equipment made out this wonderful material? You have so many benefits by doing so and these are some of them:

It requires very little or nil maintenance as recycled plastic does not rot, corrode or decay

It does not splinter or have "shakes" or cracks like traditional timber does when it naturally dries out

It is very hard to vandalise (less flammable than timber) and graffiti and is resistant to algae and insects

It is hard wearing and durable – you can expect a lifetime five times than that of timber

UV resistant and available in different colours

It is eco-friendly as it manufactured 100% out of recycled plastic bottles

But of course, it is a little bit more expensive than traditional timber but if you factor in the above benefits, it actually represents very good value for money especially when you consider its extended lifespan and reduced (none) on-going maintenance costs.
